

EC FERTILISER

Magnesium sulphate with micro-nutrients 13+34

13 % MgO, water-soluble magnesium oxide (= 7.8 % Mg)

34 % SO₃, water-soluble sulphur trioxide (= 13.6 % S)

4 % Mn, water-soluble manganese

1 % Zn, water-soluble zinc

Chemical Analysis:

	<u>typical</u>
• Magnesium Sulphate Heptahydrate (MgSO ₄ ·7H ₂ O), calculated as MgSO ₄	41.7 %
• Water of crystallisation (H ₂ O)	44.5 %
• Manganese Sulphate (MnSO ₄)	11.2 %
• Zinc Sulphate (ZnSO ₄)	2.5 %
• K ₂ SO ₄ , CaSO ₄ , KCl, NaCl	0.1 %

Granulometry:

	<u>typical</u>
• < 1 mm	70 %
• d ₅₀	0.6 mm

Dissolving properties:

- readily soluble, practically without residues; always vigorously stir the salt into water or solution
- the pH value is lowered by up to two units starting from a neutral water quality
- maximum solubility in 100 litres of water: abt. 75kg at 5°C and abt. 100kg at 20°C

Storage:

- Bulk Density ca. 1,050 kg/m³

Store at a cool and dry place. Excessive storage pressure and large temperature fluctuations can result in caking, which can be broken up by pounding of the bags.

Application:

5 kg EPSO Combitor® per 100 l water is preferable used as a fast acting and efficient foliar treatment to prevent and correct visible and sub-clinical Magnesium, Sulphur, Manganese and Zinc deficiencies, thus improving yield and quality.

When tank-mixed with other fertilisers and/or agrochemicals, the manufacturers instructions should always be followed. EPSO Combitor® should always be admixed before other agrochemicals are added.
